SIMPLY BEAUTIFUL

Imagine being able to have the look of genuine hand-chiseled natural stone columns in a fraction of the time. And at a truly affordable cost. Now you can, with elegant BellaStone® Architectural Columns by Crane.

BellaStone Architectural Columns look and feel like real stone because they're made with real stone. You can choose either the cooler gray tones of Torino or the warmer earth tones of Tuscan. Each is enhanced with color-fast natural pigments for beauty that endures.

SIMPLY VERSATILE

Another beautiful aspect of BellaStone Architectural Columns is their remarkable versatility. Column modules are available in 20"x20"x16" or 20"x20"x38" dimensions. You can also add a coordinated cap to finish the look.

Use these modules individually or combine them in any configuration to create the column height and profile you desire. With BellaStone Architectural Columns, a wide variety of options are possible. Here are a few to consider:

Note: When cap is installed it covers the top 2" of the column. Above dimensions are to the underside of the installed cap.

SIMPLY PRACTICAL

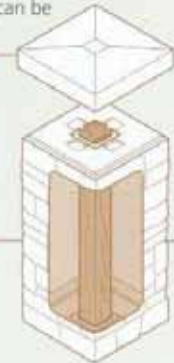

Easy installation and affordable total installed cost make BellaStone Architectural Columns ideal for projects of any size, large or small.

For only a single or a few stone columns, it may be challenging to find a contractor willing to accept

the job and complete it cost-efficiently. But BellaStone Architectural Columns can be installed in three easy steps:

1. Secure a 4"x4" wood post.
2. Slide the module(s)* over the post (even the largest modules weigh only about 25 pounds).
3. Complete the column with a coordinated cap. It's that simple!

So with BellaStone Architectural Columns, you can conveniently add the appeal of stone columns to any job, including:

- Fencing of any length
- Gates
- Porch columns
- Mailboxes
- Development signage

*When using less or more columns, BellaStone mortar sealant is recommended for a seamless look.
